3D Human Anatomy hard disk installation for Windows PC

To install the 3D Human Anatomy:Regional Edition titles onto the hard drive of your computer, you will need to carefully follow the instructions below.

Map the P: drive on your computer by following the directions located at the following website:

http://ts.acadiau.ca/how-do-i-map-network-drives-like-the-p-drive.html

Under the header "How Do I Map Network Drives (Like the P Drive)?", select the appropriate link that corresponds to the operating system of your Windows PC computer. You will most likely choose the instructions for either "Windows XP" or "Windows Vista / Windows 7". If you have Windows 8, the instructions to map the P Drive will probably be the same as for Windows 7. If you have troubles please stop by Tech Services in the basement of the BAC. Most of you with a non MAC computer will likely have Windows Vista, Windows 7 or Windows 8 so choose those instructions. Read and follow the directions carefully!

Note: The address on the P: drive that you are wanting to get access to and what you type in the blank is the following: **\\ad.acadiau.ca\public**
You do not type the "P:\ =" as it appears in the instructions.

Once you have mapped the P Drive, go to "Computer" and then under "Network Locations" you will click on the "P: Drive" or it may be called "public(\\ad.acadiau.ca)". You will want to then navigate to the following folder: "P:\Programs" and find the "Primal Pictures" folder. Right click on this folder and select "Copy"

Copy the folder "Primal Pictures" from the P: drive onto your Desktop by right clicking somewhere on the Desktop and selecting "Paste". **Note: You can install the "Primal Pictures" folder with all the data files anywhere within your own personal files on your computer, it is completely up to you where you copy this folder onto your computer. Just make sure you know where to find the "Primal Pictures" folder later.**

There is almost 8 gigabytes (7.58 GB to be exact) of data in the Primal Pictures folder on the P drive so it will take a significant amount of time to download all these files and you should absolutely have your computer plugged directly into the internet with an Ethernet cable (note: this will take too much time if you do it over the wireless network and has very rarely worked in the past). I suggest you start downloading the files later in the evening when you are okay leaving your computer hooked up to the internet for 3-4 hours. I also recommend that you try and do this on campus as well. If you live off campus and plan to download all this data from home, you should visit this site http://ts.acadiau.ca/how-do-i-set-up-a-vpn-virtual-private-network.html to learn about Virtual Private Network (VPN). VPN allows you to access resources off campus which would otherwise only be available to clients or students on campus.

After you copied all the data from the P: Drive to your C: Drive you should right click on the "Primal Pictures" folder on the P: Drive and select "Properties". Do the same for the "Primal Pictures" folder in your "C:\Program Files" folder and make sure both folders have the same number of files and folders. Look at "Size" and "Contains" and compare between the P: and C: Drives. If they are the same between the two Drives then you can proceed but if they are not you will have to repeat the downloading process.

The first thing you want to install is "AdobeAIRInstaller" and this should be located in the following folder on your computer if you installed the "Primal Pictures" folder in "C:\Program Files":

C:\Program Files\Primal Pictures\AIR\win

The next step will involve running a new installer file for each of the 9 titles (Foot, Hand, Head, Hip, Knee, Pelvis, Shoulder, Spine and Thorax). These installer files are located within the "3DHAR" folder within the "patch" folder:

C:\Program Files\Primal Pictures\patch\3DHAR

The following instructions are for the Interactive Foot & Ankle title, but the instructions for the other 8 titles will be the exact same, just using a different installer file (.air file)

In the "3DHAR" folder, double click on the "Foot_v1.66_unprotected.air" file and then you will be prompted to install the program. Click "Install" and you will be prompted once again.

You should ensure that the checkbox for "Add shortcut icon to my desktop" and for "Start application after installation" are both checked. Then it will ask you what folder to install the program to and you should leave it as is. It should be the following folder:

C:\Program Files\Primal Pictures Products\3D Human Anatomy

If the program does not start up automatically you should attempt to run the "Interactive Foot & Ankle" from the icon on your desktop or the entry in the Start Menu, under 'Primal Pictures'.

CAUTION: You are NOT done yet, keep going with the steps below.

The program "Interactive Head and Neck" should start to run and when it does a dialogue box will appear stating "The Images directory was not found." **DO NOT press "Try Again".** Instead press "Advanced" and then "Browse" to browse through your hard drive to identify this directory:

C:\Program Files\Primal Pictures\data\images

If instead you installed the folder "Primal Pictures" on your Desktop then you would navigate to "Desktop\Primal Pictures\data\images"

Make sure the "images" folder is highlighted and press either the "Select" or "OK" button.

The program should now run directly from your hard drive. The first time you run it you will need to click on the check mark box beside "I have read and understood the terms of the license" and finally click "OK"

Repeat this process for the other 8 titles.

If you have any problems please send Ned Kelleher (Lab Technician) an email (ned.kelleher@acadiau.ca) or stop by his office (ACC 385B) but **only after** you have downloaded all the files from the network P: drive onto your own computer.

Please download this program immediately and do not wait to do this later in the term as exams approach.
